SERAMİK DIŞ CEPHE SİSTEMLERİ

Modern mimarinin ihtiyaçlarına yönelik olarak tasarladığımız seramik cephe sistemlerimiz, estetik ve kaliteyi bir arada sunmaktadır. Farklı projelere uygun, yedi özel sistemimiz mevcuttur ve her biri benzersiz özelliklere sahiptir:

1. YAPIŞTIRMA SİSTEMİ

Yapıştırma sistemi, doğrudan profil ve seramiğin birbirine yapıştırılarak, pürüzsüz ve temiz bir görünüm sağlayan bir yöntemdir. Minimalist bir estetik arayan projeler için idealdir ve güçlü yapışma ile uzun ömürlü dayanıklılık sunar.

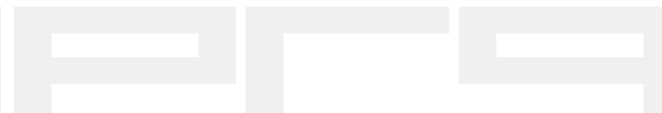

2. SİNERFLEX SİSTEMİ

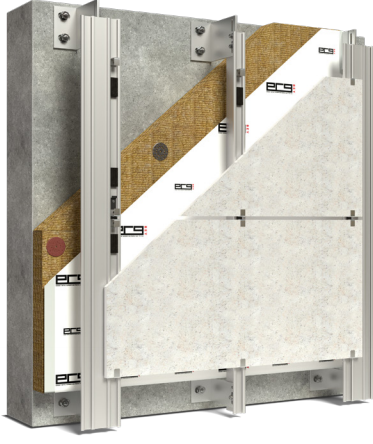

Sinterflex, hafif ve ince panel çözümü olup, mükemmel dayanıklılık ve esneklik sunar. Kolay taşınabilir ve kurulabilir olması, özellikle geniş cephelerde modern bir estetik yakalamak isteyen projeler için ideal hale getirir.

3. MULTİKLİPS SİSTEMİ

Multiklips sistemi, çok işlevli ve esnek bir montaj çözümüdür. Çeşitli panel boyutları ve malzemelerine uyum sağlarken, daha büyük cephe projelerinde stabilite ve güç sunar.

4. KLİPS SİSTEMİ

Klips sistemi, kolay ve hızlı montaj imkanı sunan, klips tabanlı bir cephe sistemidir. Hassas hizalama sağlar ve hızlı montaj gerektiren projeler için esnek ve müdahalesiz bir çözüm sunar.

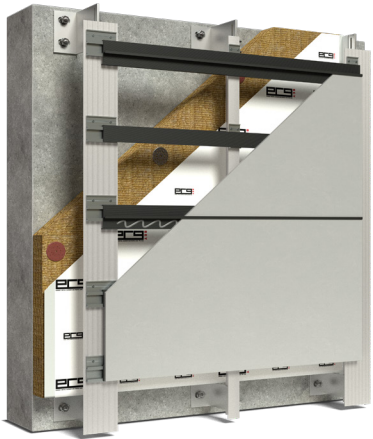

5. DOĞAL TAŞ SİSTEMİ

Doğal Taş sistemi, seramik teknolojisini doğal taş ile birleştirerek premium ve lüks bir cephe yaratır. Doğal malzemelerin estetiğini modern seramik kaplamanın pratikliği ile buluşturan bu sistem, üstün bir görünüm sunar.

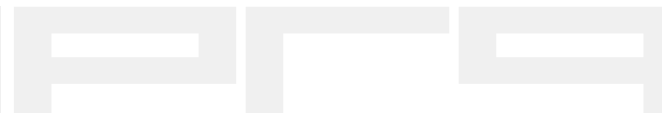

6. OMEGA SİSTEMİ

Omega sistemi, gizli bağlantı mekanizması ile öne çıkar ve şık, temiz bir görünüm sunar. Yüksek performanslı malzemeleri ve tasarımı sayesinde, maksimum dayanıklılık ve hava koşullarına karşı direnç sağlar.

7. POLİÜRETAN SİSTEMİ

Poliüretan Askı sistemi, poliüretan temelli montaj yöntemi ile üstün ısı yalıtımı ve enerji verimliliği sağlar. Hem estetik hem de fonksiyonel performans gerektiren projeler için mükemmel bir seçimdir.

1. Ankraj Montajı

Montajın ilk adımı, alüminyum profillerin duvara sabitlenmesini sağlayan ankrajların yerleştirilmesidir. Bu parçalar, taşıyıcı profillerin stabilitesini sağlayarak cephe sisteminin temel altyapısını oluşturur. Alüminyum profillerin başlangıç ve bitiş noktalarına denk gelen yerler taşıyıcı ankraj ve ve ortaya destek ankraj kullanılır. Ankrajlar beton üzerine çelik dübel ile, ytong üzerine plastik dübel kullanarak sabitlenir.

2. Taşyünü Montajı

Ankrajlar monte edildikten sonra, yalıtım amacıyla taşyünü uygulaması yapılır. Taşyünleri zeminden 30 cm yükseklikten tuğla dizilimi gibi döşenir. levhaları dört köşesine plastik taşyünü dübelleri ve ortasına bir adet metal yangın dübeli kullanılarak sabitlenir. Bu, taşyününün termal yalıtım sunmasını garanti eder.

3. Nem Bariyeri Uygulaması

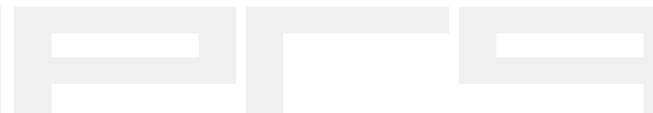

Taşyünü uygulandıktan sonra, yalıtımın korunması ve binanın nemden etkilenmemesi için buhar dengeleyici örtü (nem bariyeri) tamamen taşyününü kaplayacak şekilde uygulanır. Nem bariyeri, taşyününün her yerine düzgün bir şekilde yerleştirildikten sonra, hem nem bariyerinin kenarları ve hem ankraj ile temas eden noktaları, bariyer bandı ile iyice kapatılır. Bu işlem, dış etkenlere karşı maksimum koruma sağlar.

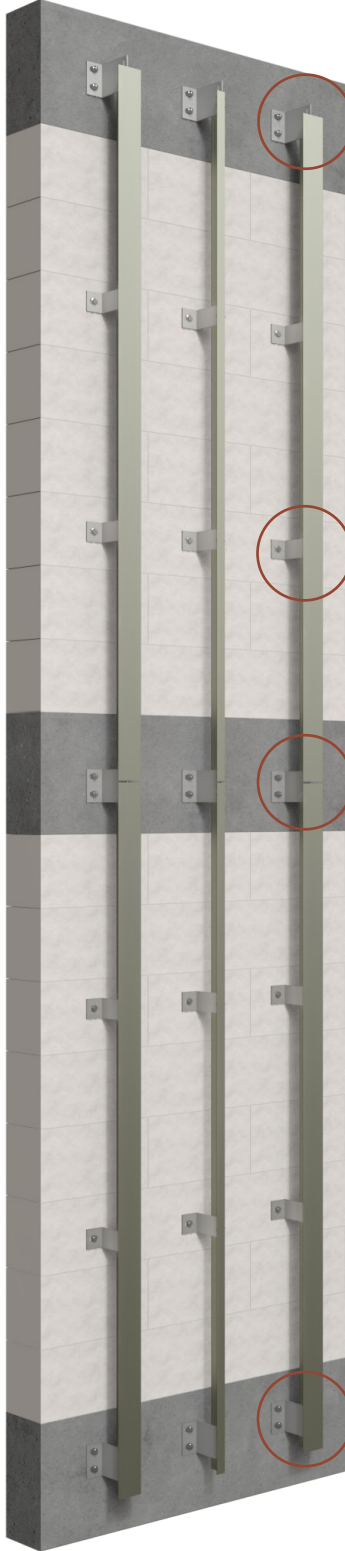

4. Su Yalıtımı ve XPS Montajı

İzolasyon tamamlandıktan sonra, taşyünü ile zemin arasındaki boşluk XPS levhaları ile doldurulur. XPS suyun taş yününe yükselmesini engelleyerek uzun vadeli yalıtım sağlar.

5. Alüminyum Profil Montajı

Yalıtım ve nem bariyerlerin tamamlanmasının ardından, sıra alüminyum profillerin montajına gelir. Alüminyum profiller, bir sonraki sayfada gösterildiği gibi trapez vida kullanarak ankrajlara vidalanır.

* Beton altyapı için ankraj
çelik dübel ile sabitlenir.

* Alüminyum profili, en üst
nuktada şekilde gösterildiği
gibi sabit ve kayar deliklere
trapez vida kullanarak
sabitlenir.

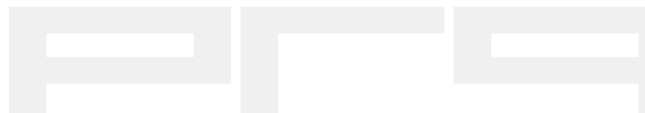

* Ytong altyapı için ankraj
plastik dübel ile sabitlenir.

* Alüminyum profili, ortada
2 destek ankraja sadece
kayar deliklere trapez vida
kullanarak sabitlenir.

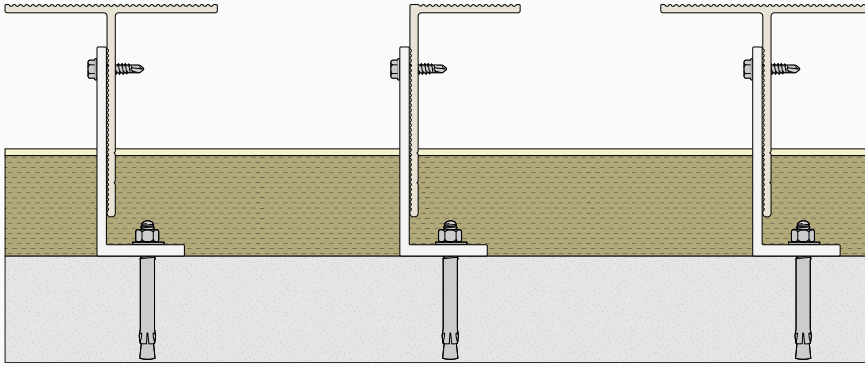

* Alüminyum profili en alt
nuktada taşıyıcı ankrajın üst
kayar deliğine trapez vida ile
sabitlenir.

* Bir sonraki profil aynı şekilde
orta sabit ve alt kayar deliklere
sabitlenir.

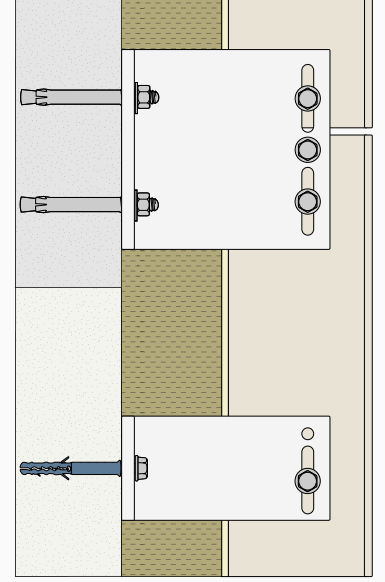

* En alt noktada alüminyum
profili sadece ankrajın kayar
deliğine trapez vida ile
sabitlenir.

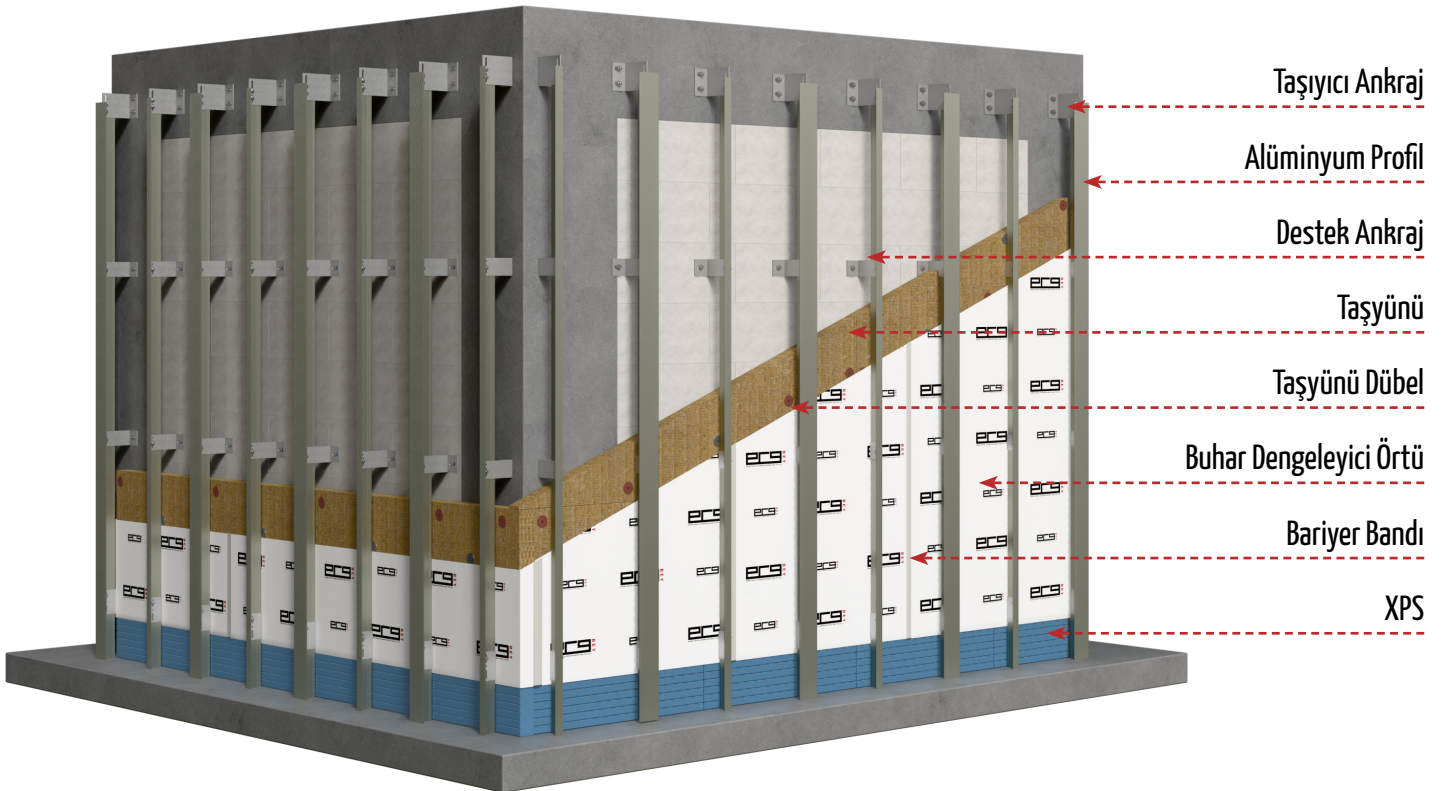

Alüminyum profil montajı
